Investment Objective

Vanguard Small-Cap Index Fund seeks to track the performance of a benchmark index that measures the investment return of small-capitalization stocks.

Investment Strategy

The fund employs a “passive management”– or indexing–investment approach designed to track the performance of the MSCI® US Small Cap 1750 Index, a broadly diversified index of stocks of smaller U.S. companies. The fund attempts to replicate the target index by investing all, or substantially all, of its assets in the stocks that make up the index, holding each stock in approximately the same proportion as its weighting within the index.

See reverse side for Fund Profile.

Note: On March 28, 2003, the fund’s board of trustees approved the adoption of the MSCI® US Small Cap 1750 Index as the fund’s new target index. The fund tracked the Russell 2000 Index through May 16, 2003.

Who Should Invest

- Investors seeking long-term growth of capital.
- Investors seeking a simple, low-cost way to invest in small-capitalization stocks.
- Investors with a long-term investment horizon (at least five years).

Who Should Not Invest

- Investors unwilling to accept significant fluctuations in share price.
- Investors seeking significant dividend income.

Assets: \$5,640,099,420

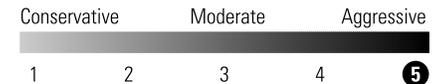

Expenses: 0.27%*

A Few Words About Risk

When investing in stock funds, short-term losses (or gains) are common, largely as a result of sudden movements in stock prices as views change about the economy and individual companies. However, over extended periods the market's ups have tended to outweigh its downs. There is no guarantee this will continue. Usually, the longer you hold your investments, the lower your chances of losing money.

Investment Terms

Dividends: Payments made by companies to investors in their stock. The payments typically depend on economic conditions and the company's financial health.

Expenses: The costs of running a fund, expressed as a percentage of the fund's assets. For example, a fund may have expenses that total 0.30% (less than half of 1%) of its assets.

Index Funds: Mutual funds that try to track as closely as possible the performance of a target index (e.g., a large group of U.S. stocks, foreign stocks, or bonds). Index funds may invest in all or a representative sample of the stocks included in the target index.

Overall Risk Level:

The Small-Cap Index Fund holds stocks of small U.S. companies, which historically have been more volatile in price than larger-company stocks. As a result, the fund carries a higher level of risk than most funds that hold large stocks.

Market Risk: The chance that the value of an investment will change because of rising (or falling) stock or bond prices.

Mutual Fund: An investment company that combines the money of thousands of people and invests it in a number of securities (stocks, bonds, short-term reserves) to achieve a specific objective over time.

Total Return: The change in the value of an investment, plus any income from interest or dividends. The standard measure of a mutual fund's performance.
