

300-Area End States Questions

Future Land Uses

Based on the possible post-cleanup land uses (primarily focused on the time frame of 20 years into the future and beyond),

- What range of activities could the public, workers, and/or visitors be involved in within the region now known as the (industrialized) 300 Area?
- Outside the industrialized 300 Area?
- Should other alternative activities (beyond those consistent with the assumed land uses) be considered for comparison or other purposes?
- Based on the desired land-use and exposure scenarios, what types of institutional controls are appropriate, and over what time frames?

Groundwater Remediation Alternatives and Technologies

Are the alternatives we are considering for the groundwater feasibility study appropriate? Are you aware of any other potential groundwater technologies which should be considered? Are there other considerations that should be evaluated?

Groundwater Remedy Selection Considerations

Given the possible types of surface uses and the potential groundwater remediation alternatives, what considerations are important for groundwater remedy selection? (For example, what is an acceptable period of time to achieve groundwater goals, and under what surface end states would it make sense to continue with monitored natural attenuation or be necessary to pursue alternative approaches?)
