HANFORD Sitewide Message

January 7, 2018

TO: All Hanford Site Employees

SUBJECT: New Work Control Zone Near PFP

PLEASE DISTRIBUTE THIS MESSAGE TO EMPLOYEES WHO DO NOT HAVE ACCESS TO A COMPUTER.

As stabilization and recovery efforts continue at PFP, the facility has established an expanded work control zone. Personal vehicles will not be permitted within this controlled area.

Barriers and signage (shown on right) has been placed to alert personnel to corresponding road closures and provide contact information for the PFP on-call shift manager.

The PFP on-call shift manager will be the single point of contact to authorize non-PFP personnel to enter the work control zone. The attached map identifies the controlled area.

CHPRC's sole focus at PFP is entirely on the health and safety of the workforce, addressing any concerns that workers may have, continuing to ensure that the PFP facility/debris and rubble piles are in a stable condition and mitigating the potential for any additional spread of contamination. CHPRC will not conduct any additional PFP demolition work until DOE has been briefed and concurs with the path forward.

Note: For current information on road closures, barricade hours of operation changes and other traffic impacts, go to the MSA home page at <http://msc.ms.rl.gov/ims/> or directly to <http://msc.ms.rl.gov/ims/page.cfm/QuickLinks/TrafficImpactsandRoadClosures>.
