

1979 Snyder St, Suite 150, MSIN G3-70, Richland, WA 99354

To: Workers Separating from the Hanford Site:

HPMC Occupational Medical Services (OMS) is offering all workers separating from the Hanford Site a blood test called the Beryllium Lymphocyte Proliferation Test (BeLPT) to evaluate for beryllium sensitization. This also includes workers already in beryllium programs. The BeLPT is provided at no cost to you. The result of your test will be provided approximately four weeks after your appointment.

The BeLPT can be performed prior to your date of departure from the Hanford site. HPMC OMS strongly encourages scheduling your appointment early as there is a limit to the number of BeLPTs that can be performed each day and will help ensure an appointment time that is more convenient for you.

Please contact the HPMC OMS scheduling office at 376-6251 or 373-9258 if you wish to have this test. This will allow HPMC OMS scheduling to arrange your appointment for a day and a time when testing is available.

If you decide to follow-up with beryllium screening after you leave the Hanford site, you may contact the National Supplement Screening Program for former U.S. Department of Energy workers at 1-866-812-6703. Additional information is available at <http://www.ornl.gov/nssp/>

The Hanford Beryllium Information Booklet is available on the Hanford website at [http://www.hanford.gov/health/files.cfm/Beryllium\\_Information\\_Booklet.pdf](http://www.hanford.gov/health/files.cfm/Beryllium_Information_Booklet.pdf). This booklet contains information that must be provided to you one week prior to your initial testing. Please refer to this booklet for additional information on beryllium or call the HPMC OMS Beryllium Case Manager at 376-6000 with any questions or concerns.

Former construction/subcontractor workers may contact the Building Trades National Medical Screening program at 509-783-6830. Additional information is available at <http://www.btmed.org>.

Thank you,

HPMC Occupational Medical Services
