Biography

Stacy L. Charboneau Manager

Stacy L. Charboneau was named Manager for the U.S. Department of Energy's (DOE) Richland Operations Office (RL) in December 2014. In this role, Charboneau is responsible for management and oversight of cleanup of the 586-square-mile Hanford Site, with the exception of liquid tank waste and construction of the Waste Treatment Plant, which are under the purview of DOE's Office of River Protection. RL is currently focused on cleaning out and demolishing the high-hazard Plutonium Finishing Plant, excavating and disposing of contaminated soil and solid waste, treating contaminated groundwater, removing radioactive sludge from the K West Basin, and infrastructure to support cleanup into the future.

Charboneau previously served as the RL Deputy Manager, responsible for oversight of daily operations, program planning, project execution, budgeting, compliance with the Hanford Federal Facility Agreement and Consent Order (Tri-Party Agreement), and safe, environmentally acceptable and responsible management of the Hanford Site.

Prior to this position, Charboneau served as the RL Assistant Manager for Safety and Environment, and was responsible for oversight of environmental, safety, health, transportation, and quality assurance programs at the Hanford Site, including management of the RL facility representative and safety system oversight programs, site-wide environmental permitting and safety programs, and nuclear safety basis reviews. She also previously served as the Deputy Manager and Chief Operating Officer of the DOE Office of River Protection (ORP), assisting the Manager in his responsibilities for the safe storage, retrieval, treatment, and disposal of 56 million gallons of chemical and radioactive tank waste at the Hanford Site. Prior to her Deputy Manager role, she was the Assistant Manager of and Level IV Project Director for the Hanford Tank Farms Project.

Charboneau has more than 15 years of experience managing projects involving nuclear operations, construction, environmental remediation, and deactivation and demolition. In her previous work for RL, Charboneau served as a Facility Representative and as Program Manager for the Facility Representatives. She also held the position of Engineering and Construction Projects Manager for the Spent Nuclear Fuel Project and served as Federal Project Director for River Corridor and Central Plateau projects, including the Plutonium Finishing Plant. Charboneau has worked at Hanford for 20 years and has 24 years of federal service, including working for the Naval Undersea Warfare Center.

Charboneau holds a master's degree in engineering management from the University of Massachusetts and a bachelor's degree in electrical engineering from South Dakota State University.
