

REACH

A publication of the U.S. Department of Energy for all Hanford Site employees

INFLATABLE SHIELD: CH2M HILL Hanford Group workers inflate a containment tent inside the 244-AR Vault. From inside the tent, holes will be cut in the concrete floor to access and retrieve the approximately 19,000 gallons of liquid waste in storage tanks below. When it was in service, the 244-AR Vault was a lag storage and treatment facility for waste from the Plutonium Uranium Extraction (PUREX) plant.
