Subject: PFP RECOVERY ORGANIZATIONAL UPDATE

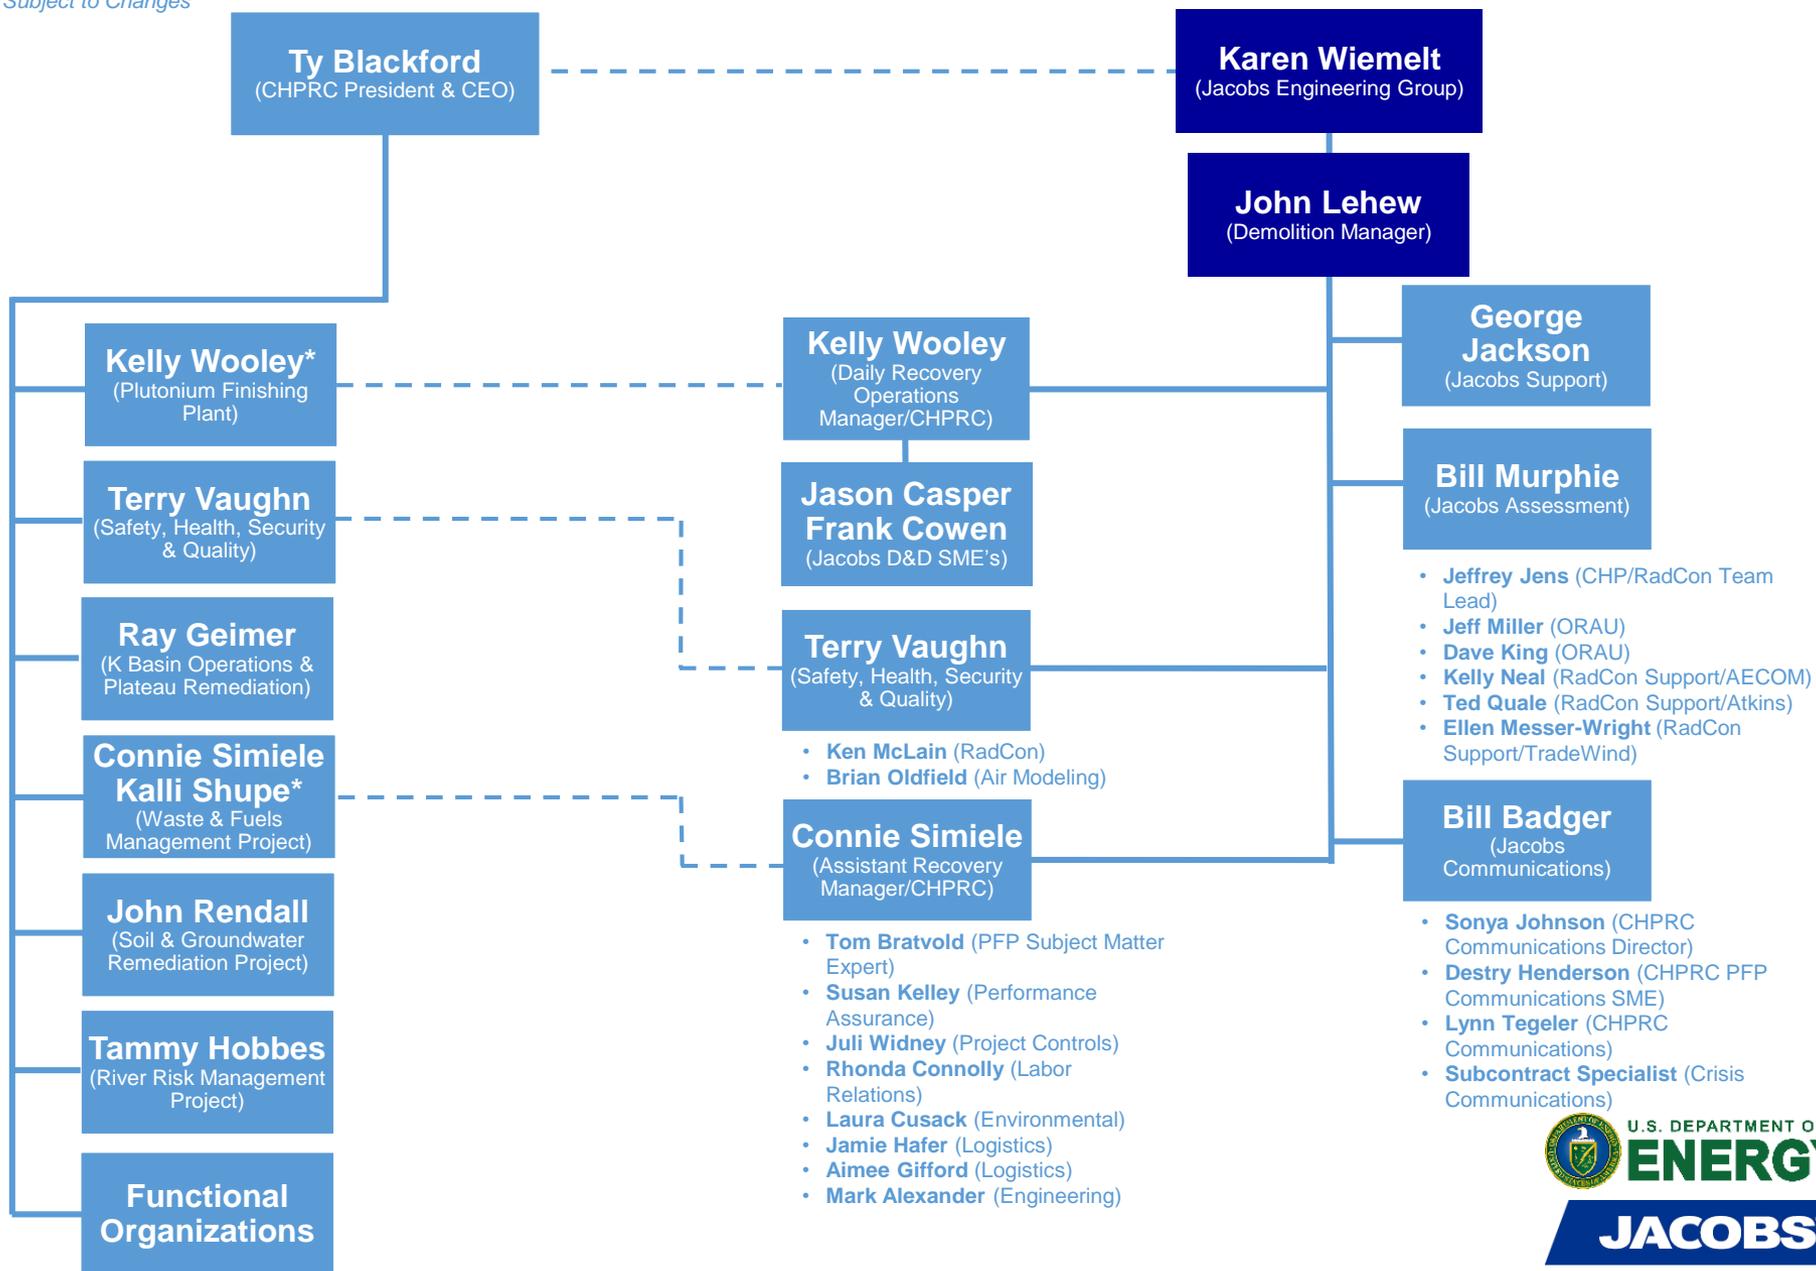

The Plutonium Finishing Plant (PFP) recovery team continues stabilization and recovery activities at the PFP in preparation for submission of CHPRC's plan for restarting demolition work. I would like to sincerely thank John Fulton for his leadership in managing the PFP recovery project with support from Connie Simiele and Bill Murphie. John and his team completed the draft Root Cause Evaluation report; expanded the PFP control zone; identified and initiated risk reduction and stabilization activities; and strengthened processes, procedures and communications in support of recovery.

As we begin transitioning from recovery toward preparing to resume demolition, John will leave the team on March 15, 2018, and be succeeded by **John Lehew** as the PFP Demolition Manager. John is another familiar face at the site, and we welcome his return and leadership of this important effort. He will take over on March 16, and he will arrive onsite in mid-April. This position will continue to report to me as the Board Chair. Connie Simiele will continue to support the efforts. George Jackson, another executive with extensive Hanford experience, will join the team and will assist John. An updated organizational chart is attached.

Our priority, as always, is to ensure the safe completion of the PFP project, and to reduce risk to the workers, public and the environment. The entire team is making great progress in systematically completing recovery actions for the contamination spread at the Plutonium Finishing Plant, identifying the root cause and implementing measures to ensure the safety of Hanford employees and the environment. I would like to thank everyone for their hard work in supporting recovery efforts and remaining safe as we move toward resumption.
